The details shown on the following pages are suggestions or guidelines for installing the Medallion-Lok roof panel system over plywood and purlins. The installation details shown here are proven methods of construction, but they are not intended to cover all building requirements, designs or codes. The details may require changes or revisions due to individual project conditions.

Installation procedures shall be in accordance with the manufacturer's printed instructions, details or approved shop drawings. Installers should thoroughly familiarized themselves with all instructions prior to beginning the installation process.

The designer/installer is responsible to ensure the following:

That the details here meet the particular building requirements.

Awareness of and allowance for expansion/contraction of the roof panels.

That adequate water-tightness is maintained.

That a proper uniform substructure is used to avoid panel distortion and that the substructure meets necessary code requirements.

That all supporting members have been examined and are straight, level and plumb.

McElroy Metal can provide all flashings and accessories shown in the installation drawings unless noted otherwise. Panels, flashing and trim shall be installed true and in proper alignment with any exposed fasteners equally spaced for the best appearance. Sealant shall be field applied on a clean, dry surface.

Some field cutting and fitting of panels and flashings is to be expected and to be considered a part of normal installation work. Workmanship shall be of the best industry standards and with installation performed by experienced metal craftsmen.

Oil canning of metal panels is in the product and is not a cause for rejection. Striated panels are recommended as the reduce the appearance of oil canning.

INSTALLATION DETAILS
NOTES: 1. Attach Eave Trim as shown with #10-16 x 1" Tek2 Pancake Head Fasteners. Space fasteners so they fall where a panel seam will be. Minimum of 3 fasteners per 10'-0".

2. Attach face of Eave Trim to Wall Panels with 1/4-14 x 7/8" Lap Tek Fasteners at each Major Rib of Wall Panels.

3. Apply 3/16" x 7/8" Double Bead Tape Sealant to flange of Eave Trim in a continuous line along the length of the Eave.

4. Align your panels and square to your Eave. Once in place, fasten panels with 1/4-14 x 1 1/4" Tek2 ZAC Fasteners per the Fastener Patterns for your width panel on page B-1.

5. Once your panels are fastened in place, apply a 3/16" diameter bead of Butyl Tube Sealant up the vertical male leg of the panel. This sealant needs to wrap around the seam as shown on page B-1.

2. Install Perimeter Zee as shown.
3. Attach Eave Trim as shown by hooking trim to Perimeter Cleat and then securing with #10-16 x 1" Tek2 Pancake Head Fasteners. Space fasteners so they will fall where a panel seam will be. Minimum of 3 fasteners per 10'-0" of Eave Trim. Locate fasteners where panel seam will fall.
4. Apply 3/16" x 7/8" Double Bead Tape Sealant to flange of Eave Trim in a continuous line along the length of the Eave.
5. Align your panels and square to your Eave. Once in place, fasten panels with 1/4-14 x 1 1/4" Tek2 ZAC Pancake Head Fasteners. Space fasteners per the Fastener Patterns for your width panel on page B-1.
6. Once your panels are fastened in place, apply a 3/16" diameter bead of Butyl Tube Sealant up the vertical male leg of the panel. This sealant needs to wrap around the seam as shown on page B-1.
