F-Series Plate Wall Panels

*M*ake your project stand above the rest with Visionline F-Series Wall Panel. The F-Series is a solid metal flat plate wall panel system that adds beauty to any project and at a price point much more favorable than ACM panels. F-Series does not require field-applied sealants, extrusions, gaskets or exposed fasteners, which reduces on-site labor expense. Common applications include walls, facades, and rainscreen, in both large sections and for architectural accents.

Available in McElroy's architectural colors, F-Series panels are an excellent complimentary product to McElroy's other roofing and siding systems. Architects and designers can mix and match components to achieve desired architectural looks.

F-Series panels are manufactured from a 22 gauge Galvalume steel substrate and coated with Sherwin Williams Fluoropon PVDF (Kynar 500®) coating. Standard sizes are 16" x 24", 16" x 34" and 16" x 54" with 1" depth. Other sizes are available - please inquire for details.

F-Series installation over hat section sub-framing.

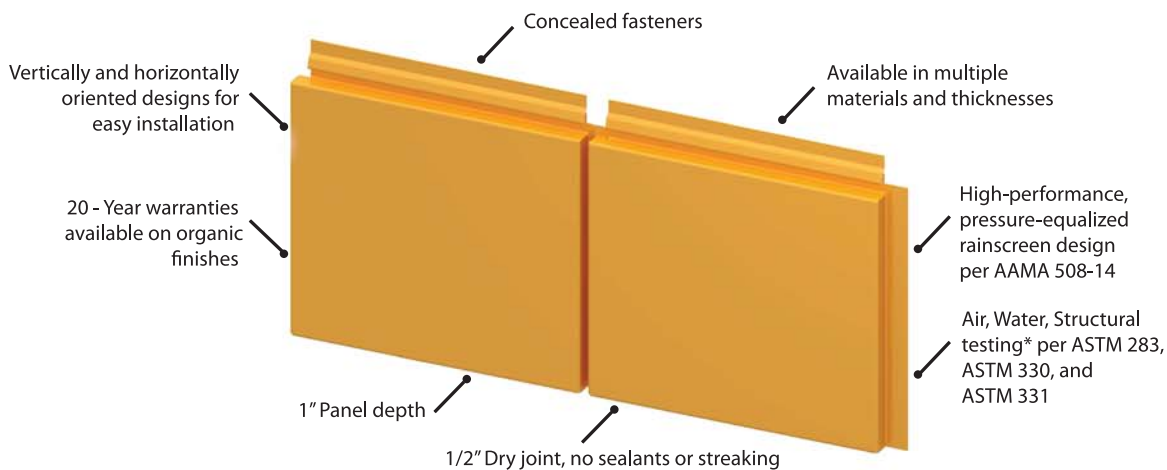

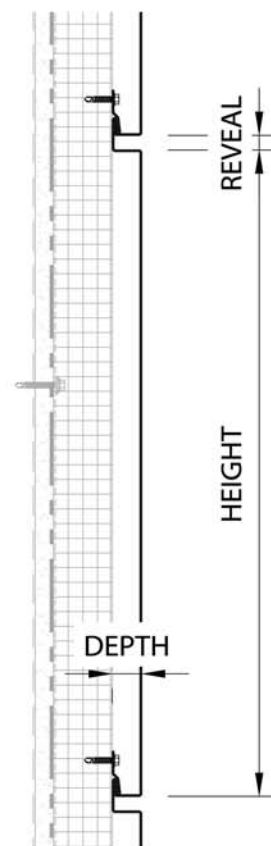

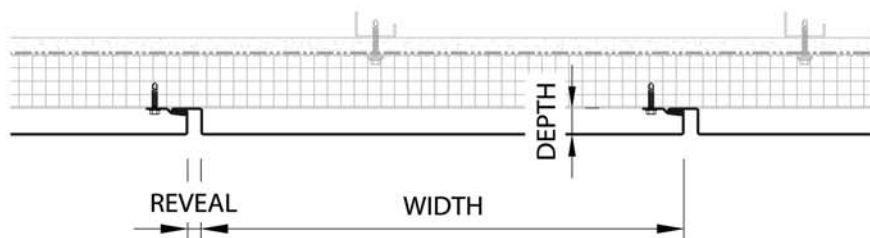

Visionline

Ease of installation is a key benefit of F-Series panels and for enhanced design flexibility, F-Series panels can be installed

VERTICALLY

or

HORIZONTALLY

* Testing conducted on wall assembly with F-Series as Rainscreen.

Note: Oil canning is a natural occurrence in metal panels and not a cause for panel rejections.
